

Hemp, Marijuana & CBD: What is the difference?

Hemp and Marijuana are two types of Cannabis Sativa. The difference between them is their psychoactive component: tetrahydrocannabinol, or THC. Hemp has 0.3% or less THC on a dry weight basis. Alternatively, the average THC in Marijuana is 20%.

Cannabidiol (CBD) is one of many cannabinoids found in cannabis. Cannabinoids from Hemp-Derived CBD bind to receptors in the Endocannabinoid System (ECS) and help to repair damaged cells. CBD also enhances the immune system, reduces tension, helps maintain joint flexibility and promotes overall health & wellness.

What are the different types of CBD?

ISOLATE CBD is extracted from the hemp plant and is the purest form of CBD. During the CO2 extraction process, compounds such as terpenes, flavonoids, plant parts, and other cannabinoids are removed. It is THC FREE*.

BROAD SPECTRUM CBD preserves some of the compounds such as beneficial cannabinoids & terpenes when extracted from the hemp plant. In this form, trace amounts of Delta-9 tetrahydrocannabinol (THC) remain; less than 0.05%.

FULL SPECTRUM CBD is known as whole plant and is extracted from hemp. In this form, all compounds that naturally occur in the plant such as terpenes, essential oils, and other cannabinoids including Delta-9 tetrahydrocannabinol (THC) remain. Full-Spectrum CBD contains less than 0.3% Delta-9 THC.

DELTA-8 THC (D8 THC) is a cannabinoid that exists in small amounts within the hemp plant. Our Delta-8 THC is extracted & concentrated into a distillate and is NOT synthetic. It provides the same health & wellness benefits as Delta-9 THC, but it is approximately 50% less potent.

DELTA-9 THC (D9 THC) is a cannabinoid found in the hemp & marijuana plants. The difference is Delta-9 derived from hemp has less than 0.3% THC. Delta-9 THC provides numerous therapeutic benefits and ultimate relaxation.

Entourage Effect

Full Spectrum contains multiple cannabinoids & terpenes that boost the performance of CBD and enhance the endocannabinoid system.

Cannabinoids like **Delta-8 & Delta 9 THC** are more effective when combined with terpenes and other cannabinoids from Full Spectrum CBD.

The consumption of those ingredients creates an Entourage Effect as the compounds work synergistically for maximum benefits.
